

Full-stack engineer who ships **production AI features end to end**: Claude-powered assistants with RAG and citation grounding, LLM pipelines that read vendor mail and propose contract changes, and real-time systems on **NestJS, Next.js, PostgreSQL, Redis and Socket.IO**. Comfortable from Prisma schemas and BullMQ workers to WebGL shaders. Also a published novelist, which shows in how I write prompts, docs and product copy.

414 commits (~52K lines) on one AI platform in 4 months	2+ yrs building production full-stack software	17 ES modules in a ~4K-line solo WebGL racing game	1 published novel, <i>Coffee?</i> (Notion Press, 2026)

01 EXPERIENCE

HyScaler · Junior Technical Programmer (Full-Stack) Oct 2024 – Present · Bhubaneswar

AI Data Intelligence Platform · vendor data-licence & contract governance

- NestJS · Next.js · React · TypeScript · Prisma · PostgreSQL · Redis · BullMQ · Socket.IO · Anthropic Claude API · Microsoft Graph
- **Built a Microsoft Graph mail integration from scratch**: OAuth2 with proactive token refresh and server-side token storage, webhook subscriptions for real-time new-mail alerts, and a threaded inbox with cursor pagination, \$search and sandboxed mail rendering.
 - **Built an ingestion pipeline** that converts mail and attachments (PDF, DOCX, CSV) to Markdown with Pandoc and Claude. It detects file type from magic bytes and skips duplicates. A BullMQ worker bulk-syncs attachments and backfills gaps.
 - **Built LLM contract matching and change detection**: the model links emails to contracts and proposes edits, which reviewers accept, reject, edit or undo in a diff viewer before regenerating the contract with pause, cancel and revert, all streamed live over Socket.IO.
 - **Built the main features of the Claude-powered Global Chat**: RAG retrieval with phrase-level ranking, anti-hallucination grounding rules, and **citations highlighted in the source document** with the CSS Custom Highlight API.
 - **Built a semantic query cache in Redis**: an LLM normalises each query to a canonical form with a confidence score, to cut repeat LLM calls. Added invalidation, an admin `/clearcache` command and a greeting fast path.
 - **Made chat streaming more reliable**: chat runs separately from the HTTP request, with cancellation, concurrency guards, rate-limit auto-recovery, socket retry and message version history. Added @mention context injection and a prompt context budget.
 - **Built MCP-style analyst tools** with SQL timeouts, partition-filter checks and date-range query splitting. Wrote JSON-schema extraction prompts for pricing and usage rights, with selective re-extraction and batched LLM categorisation.
 - **Built Global Audit Logs and per-user activity timelines** with RBAC, advanced filters and AI-operation logging. Replaced polling with WebSockets, made the app responsive on mobile, and set up the first backend unit tests (Jest ESM).

EARLIER CLIENT & INTERNAL PROJECTS

- **Live Broadcast & Course Platform** (Next.js, Node.js, Socket.IO): integrated Google / YouTube Live for stream creation, scheduling and analytics with latency and bitrate tuning, plus real-time chat, Q&A and role-based course management.
- **Healthcare & Telemedicine App** (Next.js, Laravel): built scheduling with real-time doctor availability, EHR and e-prescriptions, and encrypted data from authorised health APIs, designed around HIPAA / GDPR principles.
- **Secure Online Exam Portal** (React, Laravel, JWT): added tab-switch detection, server-enforced timers with auto-submit, per-session question randomisation and instant grading.
- **Filament Quick Form** (Laravel, Filament): wrote an open-source package that renders and validates forms from runtime schemas with conditional fields, removing duplicated form code and most per-form migrations.

Bourntec Solutions · Junior Developer (Intern) Apr 2024 – Aug 2024 · Bhubaneswar

- Designed, built and deployed a **Flask** web application solo, owning both frontend and backend. Built a **React + Django** app with REST APIs, serializers and models, tuned for cross-browser performance.

HelIBall · 3D browser racing game · solo · Aug–Sep 2026

JavaScript (ES Modules) · Three.js · WebGL / GLSL · GSAP · Web Audio API · Vite

- **Wrote custom physics for riding inside a sphere:** riders stay on the wall only while v^2/r beats gravity. Also models slopes, nitro, drag and speed-dependent steering, on a track modelled in its own coordinate system (distance along track plus offset from centre).
- **Built AI rivals that score lanes by cost:** they predict saw-blade positions and flame-jet timing, go for pickups, use nitro tactically and adjust their pace to keep races close.
- **Wrote GLSL shaders** (simplex and layered noise) for fire, plus GPU particles, ACES tone mapping and a 9-state cinematic game flow with GSAP-driven cameras. All audio is generated in code with the Web Audio API.
- **Kept rendering fast** with instanced meshes, shared materials, a capped pixel ratio and vector reuse to avoid GC stalls. About 4,000 lines in 17 modules.

NiyazUnveiled · author platform & book launch site

niyazunveiled.com · github.com/skniyaznoor/niyazunveiled

Next.js 16 (App Router) · React 19 · Firebase Auth / Firestore / Admin SDK · Resend · Vercel Cron · remark

- **Built a file-based Markdown CMS** (gray-matter, remark) that detects series and episodes and pre-renders 25+ stories with generateStaticParams and per-page SEO. Migrated the legacy Blogger archive automatically with turndown.
- **Added Google sign-in with Firebase Auth and real-time Firestore comments** (onSnapshot, client-side sorting so no composite index is needed), plus a reader feedback wall and book pre-orders.
- **Automated transactional and launch email:** Resend sends confirmations on pre-order, and a Bearer-protected Vercel Cron route reads pre-orders through Firebase Admin and sends the launch-day email.
- Designed a **Coffee Brew purchase flow** (an SVG cup that fills with an eased rAF animation and respects reduced-motion), plus a 3D CSS book flip, a countdown and a reading-progress bar.

DocIntel AI · legal-doc simplifier

FastAPI · Next.js · Hugging Face · Docker

- Built OCR for images and scanned PDFs (TrOCR), language detection for 100+ languages, and NLLB-200 translation.
- Generated plain-language summaries (Flan-T5) and classified documents zero-shot (BART-MNLI).

BRR Hallmark Developers · freelance

brrhallmarkdevelopers.in

- Built a lead-generating site for a Bangalore real-estate developer, with a completed / ongoing / upcoming project showcase.
- Added site-visit booking and enquiry forms, WhatsApp chat, FAQ and RERA / legal pages, with responsive WebP images.

03 TECHNICAL SKILLS

Languages	TypeScript, JavaScript (ES6+), Python, PHP, SQL, GLSL, Java, C / C++
Frontend	React 19, Next.js (App Router, SSG / ISR), Tailwind CSS, Framer Motion, Three.js, GSAP, Web Audio API
Backend	NestJS, Node.js, Laravel + Filament, FastAPI, Django, Flask, REST, WebSockets / Socket.IO
AI / LLM	Anthropic Claude API, RAG, prompt engineering, citation grounding, semantic caching, MCP-style tools, JSON-schema extraction, Hugging Face
Data & Infra	PostgreSQL, Prisma, Redis, BullMQ, MySQL, Firebase, Docker, Vercel (Cron, serverless)
Integrations	Microsoft Graph, OAuth2, webhooks, Google / YouTube APIs, Resend, Jest (unit & E2E)

04 EDUCATION

Master of Computer Applications (MCA)	2022 – 2024
Silicon Institute of Technology, Silicon University	
B.Sc. Physics	2018 – 2021
Dharmasala Mahavidyalaya, Utkal University	

05 CERTIFICATIONS & INTERNSHIPS

NPTEL: Internet of Things	2023
ACCSA: Software Application, CTTC	2021
Web Dev Intern, MEAN / MERN, SIT	2023
Sales & Marketing Intern, HighRadius	2024

06 WRITING

Coffee?

Debut novel: *Coffee? A Slice-of-Life Love Story* (Notion Press, 2026), in paperback and hardcover on Amazon, Flipkart and Notion Press. Since 2020 I have published 24+ short stories, serialised fiction and poems on **niyazunveiled.com**, a platform I built and run, where I also grow the readership through SEO and social media.
